

# Assignment 1 Instruction

My assignment is following option 2, which is adding user management and ranking function to my quiz creator web app.

I have hosted my web as following link:

<https://a1-f09ef.firebaseio.com/>

First page is the login page. User can login an existing account or sign up a new account. All account is using email as display name.

**The admin user account is:**

**admin@admin.com**

**admin123**

By login as admin user, the web will enter admin page and be able to manage the quiz.

By login as normal user, the web will enter user page and be able to choose quiz to finish. After finishing the quiz, a total score will show up and a global ranking to show the top three users.
